

Brainstorming Session AAA, AAA/SWITCH Info Day 2010, Bern

Teilnehmer

Alexandre Roy, UNIL

Guilherme Sperb Machado, UZH

Thomas Staub, UniBE

Ueli Kienholz, methologica GmbH

Jan Melissen, ZHdK

Nadine Heinz, Uni Basel (SAP Campus management)

Marco Antonini, UniLU

Mathias Rufer, UniNE

Diskussionsleitung: Patrik Schnellmann

Notizen: Thomas Lenggenhager

Kommentar

Hauptsächlich wurden bereits eingegebene Projekte vorgestellt und diskutiert. Neue Ideen wurden keine geäußert.

Exchange of assessment results / ECTS

NH: Primarily interest in transfer of assessment credit points (presentation of Mr. Hassler)

AR: Bilateral agreement on single courses bases required, not general points.

UK: Like the attribute specification was the basis for AAI, a specification of assessment info could form the basis for more general transfer of assessment info.

UNIL projects LoA/Strong AuthN

AR: Specification of CardUID was a success. For Assurance Level a new UNIL project is approved.

AR: UNIL project on strong authentication for AAI. Use cases are applications for access with administrative or financial rights. Solutions could be SMS challenge, etc.

UniNE project

MR: Students cards to be used for printing. Plan to implement a portal for transferring money into a university account for printing with the students card. Draft proposal submitted. Start with a pilot and perhaps add other partners.

UniLU project

UK: UniLU project for printing (CINDOS), AAA is important factor.

Varia

TS: Students get access to labs 24/7. Today based on keys which get lost. Based on the RFID ID in student cards that could be cheaper. UNIL has that already in place for new buildings. UniNE uses it for access to buildings but

not rooms. UniLU will not use an RFID base solution for building access due to the high costs.

JM: Recording TV sessions a hot item (nanoo.tv)? -> UNIL has a 'section cinema', the IT does not know about the demand. UniNE has a study in journalism, they might be interested.
