

Brainstorming Session VO, AAA Info Day 2010, Bern

Moderation: Martin Kos

In this session Martin Kos has presented the idea and status of a SWITCH VO project:

SWITCH develops a proof of concept VO portal & platform with some example services, but the platform will be open to everyone from the community who is interested to deliver his services to a greater user base.

The communication between the services and platform is shibboleth-based, so every shibbolethized service can be extended to provide a VO service.

The VO portal is meant as management portal: create & manage your VO, select services, invite/grant access to users etc.

Parties interested in the VO portal and its services can contact martin.kos@switch.ch
